

# RACINGTRAX MOUNTING INSTRUCTIONS FOR NORRA MEXICAN 1000

## Cars / Trucks / UTV's

Attach the RAM mount bracket with hose clamp inside cab within reach of passenger. Clamp the arm onto the ball and tighten. You will receive your tracking unit at registration which has a 1" ball on the back of it. Ziptie the 2-pin power cable end to RAM arm and run cable to power. Cut to fit.

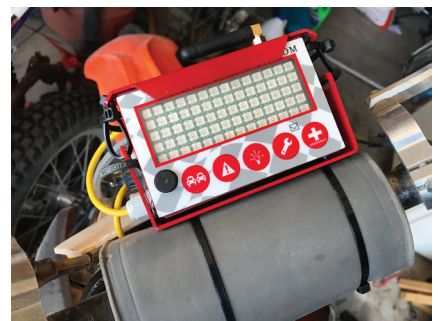

Attach **BLUE** wire to red positive inline fuse, **BROWN** wire to ground.

## Motorcycles / Quads

A red aluminum cup bracket is included in your kit. The RacingTraX tracker fits into this bracket. It is your responsibility to securely mount this bracket onto your bike in a safe location. Be mindful if your front brake cable loops during compression. The bracket is pre-cut to utilize hose clamps, carriage bolts or regular bolts. Other cutting or drilling may have to be done to fit your individual bike.

For the external antenna mount, place aluminum mount across front fender, bend arms down into place. Mark with a sharpie and drill 1/4" hole. Push bolt up from the bottom so the button head is pointing down and the threads are pointing up and out. Tighten nylock nut. You will receive your tracker at registration.

**Bring power cable end to the left side of mount. Cut power cable to fit.**

Attach **BLUE** wire to red positive inline fuse, **BROWN** wire to ground.

If you choose to use a RAM mount to mount your red cup bracket you must use at least a 1.5 inch ball. **GPScity.com** has been great to work with when buying RAM mount components and you can use code "BITD17" for 15% off your order at checkout. Here are some suggested part numbers, however it is still your responsibility to ensure that the RAM components are installed properly and in a safe location.

For the base use **RAM-235U**. For the arm use **RAM-201U-B** and for the cup bracket ball use **RAM-202U**.

**Please Note: We need to collect all race and chase units back after the race. If you do not finish you must turn your tracking unit into a RacingTraX staff member while in Mexico. RacingTraX is tracking a BITD event days after returning from NORRA and we need to collect back all the units!**
